~~expression in a plastid~~, a DNA sequence coding for a chaperonin, and a second flanking sequence, wherein said protective antigen is a bacterial antigen.

## IN THE ABTRACT:

~~Vaccines for conferring immunity in mammals to infective pathogens are provided, as well as vectors~~ Vectors and methods for plastid transformation of plants to produce protective antigens and vaccines for oral delivery are provided. ~~The invention further provides transformed plastids having the ability to survive selection in both the light and the dark, at different developmental stages by using genes coding for two different enzymes capable of detoxifying the same selectable marker, driven by regulatory signals that are functional in proplastids as well as in mature chloroplasts. The invention utilizes antibiotic free selectable markers to provide~~ provides edible vaccines for conferring immunity to a mammal against Bacillus anthracis, as well as Yersina pestis. ~~The vaccines are operative by parenteral administration as well. The invention also extends to the transformed plants, plant parts, and seeds and progeny thereof. The invention is applicable to monocot and dicot plants.~~
